PROFESSIONAL SUMMARY

Innovative Full Stack Engineer with a journey spanning mobile to web development, building secure, scalable, and AI-driven applications across diverse platforms and stacks. Experienced with Flutter for cross-platform mobile development and React.js for modern web interfaces, backed by robust server-side expertise in Java (Spring Boot), .NET, Node.js, and Python. Strong background in backend architecture, authentication systems, encryption algorithm analysis, distributed databases, multi-tenant application design, and performance optimization. Skilled in functional and performance testing, DevOps practices, CI/CD pipeline development, and cloud deployments. Passionate about solving complex engineering problems and delivering production-ready enterprise systems.

EDUCATION

University of Ilorin, Nigeria
Bachelor of Science in Computer Science
Grade: Second Class Upper Division

CERTIFICATIONS

Microsoft Certified: Azure AI Apps and Agents Developer Associate — Earned July 2026

WORK EXPERIENCE

KPMG Nigeria – Software Engineer – Enterprise Solutions January 2026 – Present

Multi-Tenant Enterprise Platform

- Built and maintained a multi-tenant enterprise application serving 10,000+ users across multiple client organizations via Active Directory integration.
- Implemented RBAC across 4 permission tiers (Super Admin, Company Admin, User, Vendor) with strict tenant-aware data isolation.
- Built an audit logging system capturing critical user actions, accessible only to admins for compliance monitoring.

Grant Management Platform

- Delivered a grant management platform for a client, enabling stakeholders to conduct due diligence and track candidates through multi-stage evaluation workflows.

Tax Information & Compliance Management System

- Took ownership of an outsourced, high-risk production codebase spanning multiple client companies and led a full security review.
- Performed VAPT and remediated high-severity risks, including web scraping exposure, outdated/vulnerable packages, and CORS misconfigurations.
- Hardened server configuration to prevent sensitive server information disclosure, reducing the application's attack surface.

DevOps & Application Maintenance

- Contributed to CI/CD pipeline design for automated deployments.
- Maintained production systems: migrations, monitoring, and deployment fixes.

AI Systems & Azure Integration

- Built AI-powered systems on Microsoft Azure to automate business workflows.

Better Career – Technology Lead July 2025 – January 2026

- Sustained platform uptime and continuity for 7+ months, integrating 2FA and CAPTCHA to strengthen security.
- Diagnosed and resolved a storage capacity issue that had degraded performance, restoring the platform to full speed.

- Led technical planning for migrating the platform to a Node.js-based architecture.

CogniX – Software Engineer January 2025 – Present
- Built an AI-powered virtual therapy assistant using React and Node.js.
- Improved response performance and implemented encryption for user chat data and personal information.
- Optimized the database by restructuring chat storage from per-message rows into JSON-based conversation objects, improving efficiency and manageability.

AcadaLens – Backend Developer October 2024 – Present
- Built the backend for an AI-powered JAMB preparation platform used by students.
- Implemented JWT authentication, refresh tokens, and RBAC.

Code Squad – Intern, Full Stack Development April 2024 – September 2024
- Built secure JWT-based authentication systems and automated workflows.

PROJECTS

BookTalk – Social Platform for Book Lovers https://booktalks.com.ng/
- Built a community platform enabling readers to discover, discuss, and review novels, religious books, and more.
- Implemented social features including user profiles, book discussions, and community feeds.
- Designed for scalability with a focus on engagement and content discoverability.

FinTrack – Personal Finance Tracker https://fin-track-omega-ivory.vercel.app/
- Developed a personal finance management tool for tracking income, expenses, and financial goals.
- Built intuitive dashboards and data visualizations to help users understand their spending patterns.
- Deployed on Vercel with a responsive, user-friendly interface.

Healtify – Health Management System
- Designed and deployed AI-driven health analytics platform.
- Implemented background processing using BullMQ and Redis.
- Containerized services using Docker with CI/CD pipelines.

Encryption Algorithm Performance Analysis (Python)
- Analyzed encryption and decryption algorithms under memory constraints.
- Measured time and memory complexity using Python profiling tools.
- Derived insights for secure system design in constrained environments.

Mobile Application (Spring Boot + Kotlin)
- Built backend REST APIs using Spring Boot with JWT authentication.
- Integrated PostgreSQL database and tested endpoints using Postman.
- Developed companion Android mobile application using Kotlin.

Distributed Grid Database System
- Configured multiple PostgreSQL nodes for distributed querying.
- Implemented Python scripts using psycopg2 for cross-node data retrieval.
- Analyzed performance across distributed database nodes.

Real-Time Chat System
- Built chat backend using Express and Socket.IO.
- Designed conversations and messages schema using ORM.
- Implemented message persistence and real-time event broadcasting.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Java (Spring Boot), C# (.NET), Python, Go (Learning)
Mobile: Flutter (Cross-Platform), Kotlin (Android)
Frontend: React.js, Next.js, Flutter (Support), Tailwind CSS, Bootstrap
Backend: Node.js, Express.js, NestJS, Spring Boot, .NET Web API
Databases: PostgreSQL, MySQL, MongoDB, Drizzle ORM, Sequelize
Security & Testing: JWT, OAuth, RBAC, Multi-Tenant Architecture, Encryption/Decryption, Functional & Performance Testing, Burp Suite, Static Code Analysis

Cloud & DevOps: AWS, DigitalOcean, Vercel, Railway, Docker, CI/CD, Microsoft Azure

SOFT SKILLS

- Advanced Problem Solving & Analytical Thinking
- Team Collaboration & Agile Development
- Adaptability in Fast-Paced Environments
- Technical Leadership & Initiative
